

**Air Knife Field Review Kit**  
**(Fits PN 104245)**

# General Instructions

## 104245 Air Knife Field Review Kit

Below is the general layout of the 104245 Air Knife Field Review Kit.

It is important to connect the air supply to the trailer air supply through the use of a ball valve (not supplied) and **NOT TO ANY OF THE AIRLINES RUNNING FROM THE CONTROL BOX TO THE COVER(S)!**

1. Insert the air manifold in the open area near the cylinder base. It is designed to only fit in the correct rotation,
2. Place the provided snap-ring on the manifold.
3. Cut a length of 1/4" airline that almost reaches the flange mounting hole. An angled cut facing the slider is best (as shown above).
4. Connect the base of the manifold to a switchable **trailer** air supply line (typically a ball valve).
